Pasture Mixtures

SCOTTS Pastureland Mix \$.35 lb.
-----------------------------------	-------

Pastureland Mix is a blend of the most desirable grasses and legumes to suit a variety of soil, moisture and fertility conditions as found in typical permanent pasture fields.

This mixture contains one-third legumes and two-thirds grasses by weight. All seeds are high in quality and germination, low in weed content and free of noxious weeds. Sow 25 lbs. per acre for a new pasture and 12-15 lbs. per acre for reseeding.

SCOTTS Hay & Pasture Mixture \$.23 lb.

An ideal mixture for average type of soil where hay may be needed for a year or two. Fifty per cent legumes by weight, including Lespedeza. Quick starting; will make hay or pasture the first season. Sow 20 lbs. per acre.

SCOTTS Heavy Duty Pasture Mix \$.39 lb.

Fifteen per cent Ranger Alfalfa and a total of 35 per cent legumes in this high yielding mixture that is also suitable for hay or first cutting silage.

SCOTTS Heavy-Duty Mix is suggested where the field is to be left in pasture for at least five years and where heavy grazing is desired. Apply fertilizer, and lime where needed, and follow recommended seeding methods. Sow 25-30 lbs. per acre.

Scott Farm Seed Company

Mechanicsburg, Ohio

LOOK INTO THE CRYSTAL BALL -- Can you afford to gamble on the seed you buy? Actually, it is more than seed--it is the crop that will be produced during the coming season or for the next several years.

There is a difference in seeds, enough to make the difference between success and failure of a crop. We've heard elevator men and farmers looking at an analysis tag say 99% pure or 85% germination--why that's good enough.

But is it? SCOTTS Seeds usually run 99.80% pure and 90% or above live vigorous seed, often for less than a dollar per bushel premium. Is that .80 purity, that 5 or 10% germination difference worth a dollar, or even two or three dollars? We think so, and here's why:

A few days ago we were quoted a car of timothy 99.60% pure, 85% germination or pure live seed 84.6%, while most of our own lots will test 99.85% pure and 90% or higher germination, giving 90% pure live seed. Or take a two hundred bushel lot of Red Clover that was offered with a pure live seed content of 85.5%, compared to SCOTTS Medium Red Clover which averages 90% pure live seed. The price tag on the bag doesn't mean much until the actual purity and germination (pure live seed) is considered.

It takes good seed for good stands, top yields--a crop you are proud to talk about. Ninety-nine per cent purity or 80 or 85 germination isn't good enough when you can buy better. Don't gamble on seed --it's the foundation to the success of your whole farming operation. Order SCOTTS before you are tempted to throw away your better judgment and listen to pocketbook appeal.

In the long run, you save money by sowing SCOTTS Seeds. They are at the top in plumpness and size, high in germination, low in weeds, and have the potential for good stands and high yields. They produce better--in fact, more than make up for any first-cost difference.

Use SCOTTS this season. Order now for prompt or later shipment to suit your convenience, but order--that's the important thing.

Yours for cleaner fields,

SCOTT FARM SEED COMPANY.

L. G. Brubaker.
